Centre for Healthcare Innovation Start-Up Enterprise Link (CHISEL) FAQs

Application Submission / Eligibility

Question	Answer
Must start-ups and/or SMEs be incorporated within last 5 years?	No, start-ups and/or SMEs submitting an application do not need to be incorporated within last five (5) years.
Do start-ups and/or SMEs need to be in Singapore?	No, CHISEL Healthcare InnoMatch is a global innovation challenge open to start-ups and SMEs registered locally in Singapore and/or overseas.
How do you assess the maturity/ market readiness of solutions?	Several factors would be considered, such as prior or existing trials results, early market data, existing number of sites of implementation, extent of current adoption of solution (if any). Solutions must be at a high level of market readiness. (i.e. Technology Readiness Level 7 and beyond, or the equivalent).
Can we on-board other start-ups as partners in our solution to increase our value proposition?	The project agreement for each of the winners would be between one (1) healthcare cluster and one (1) Start-up or SME. However, if the solution involves collaboration/ co-development with other partners or a consortium of companies, the application would only be accepted if one (1) Start-up or SME submits the application on behalf of the team or all collaborating partners. Please indicate in your application the company fronting the application and designate the contact person for your application.
Do we need to disclose in our proposal the estimated cost of the solutions, or can this be left to later stages?	In the application stage, you are required to indicate an estimated cost. If you are shortlisted or selected as the final winner, more clarification and discussion will ensue with the reviewing panel and your partnered healthcare cluster.
Can a company submit more than one proposal?	Yes. However, each proposal should be a distinct solution from other proposals you are submitting.
If we are a subsidiary (e.g. start-up arm) formed by a company, are we eligible to submit our solution?	Yes, regardless of its business area (locally or overseas), start-ups and/or SMEs with revenues below Singapore Dollars One Hundred Million (SGD$100,000,000) can participate in the Challenge. This may include research institutions and innovation units of enterprises, if they are subsidiaries.
Is the video a mandatory submission? Should it be focused on the solution or the company?	You are highly encouraged to submit a video as part of your application as it would enable the evaluation panel to better understand your solution and drive efficient

Question	Answer
	engagement with your project team. The video should be focused on the solution, so that the evaluation panel may better understand the background of your company, business proposition, and your solution.
Is professional insurance required at the application stage?	No, insurance need not be provided during application stage. However, during the test-bedding phase, you may need to discuss with your paired healthcare cluster if insurance may be required e.g. if your solution is conducting monitoring and tracking in a community setting locally. The requirements will depend on your solution and scope of the test-bedding, in discussion with your paired healthcare cluster.
Do I need to find my own partner healthcare institutions or clinicians for the submission?	No, you do not have to. Through CHISEL Healthcare InnoMatch, the winning teams will be paired up with the interested healthcare institutions at the end of the Finale. The paired healthcare institution will help you to identify the clinical project lead that you will be working with for the test-bedding.
I am already working with a healthcare institution or clinician, can I request to partner with my current partner healthcare institution or clinician?	You may not be paired with your current partner healthcare institution or clinician(s) as other healthcare clusters may be interested to test-bed your solutions as well. The pairing will be announced at the end of the Finale.

Themes

Question	Answer
Are there any specific disease areas that you are focusing on e.g. diabetes, heart disease or other chronic diseases?	The healthcare concerns in Singapore are similar to many developed nations. Solutions submitted may not necessary be for addressing these issues only. Solutions may also be targeted at addressing other issues such as mental health, aging, and frailty etc. More importantly, participants should demonstrate where the solutions had been validated and its value proposition.
If our solution has been implemented or used in other industries outside of healthcare, would it be eligible for submission?	Yes, if the use case of your solution could be adapted for the healthcare industry. You are required to elaborate on the healthcare needs your solution would address, and the relevance of your solution in addressing this need in your application form. Do also share the prior or existing trials, proof-of-concept, proof-of-value and/or clinical validations results of your solution.

Funding

Question	Answer
What does the grant funding cover?	The grant funding covers costs incurred by the winner and partnered healthcare institutions specifically for the purposes of the test-bed, such as: • Pilot manufacturing, • Purchase of consumables, • Customisation, • Test-bedding services (e.g. protocol planning, data management), • Analytics and evaluation services. All CHISEL 2024 test-bed solutions are to be evaluated using the CHI Evaluation Framework (CHIEF). CHIEF is a holistic framework for the evaluation of innovative solutions seeking real world deployment. Evaluation costs should be included in your application. You may also engage additional services (e.g. statistical analysis, study design, sample calculation etc.) from CHIEF or an independent expert for the purposes of the test-bed at your discretion.

Test Bedding & Evaluation

Question	Answer
If I am an overseas winner of CHISEL Healthcare InnoMatch, would I need to relocate to Singapore during the test-bedding?	Relocating or setting up a local office in Singapore is not mandatory. However, we do strongly advise and encourage winners to build local contacts or partnerships e.g. local distributor. This is to facilitate communication and provide local support to the partner healthcare cluster you are paired with for the test-bedding. A local presence would be helpful in building a long-term partnership (especially if the test-bedding results are favourable).
What would be the expected outcomes of the test-bedding?	The aim of the test-bedding phase is to demonstrate if the solution would be feasible in a real world, operating healthcare institution environment in Singapore. The test-bedding should be designed to inform of the solutions' potential for adoption and integration. Winners will have the opportunity to discuss and refine the success criteria of the test-bedding project with their partnered healthcare cluster before commencing the test-bed.

Question	Answer
Are there any standard requirements to the test-bedding (e.g. no. of users, specific units within the hospital)?	Test-bed should be designed to demonstrate the feasibility and viability of the solution in operational environments. The results should be significant for healthcare cluster(s) to decide on whether to adopt and procure the solutions after the test-bedding. The specifics will be at the discretion of the winners in discussion with the eventual partnered healthcare cluster. There will be specific department(s) assigned and/or recruited as potential users in the healthcare cluster for the test-bedding of the solution. The winning teams will be provided up to six (6) months to discuss with the partner healthcare cluster on how to refine the test-bed.
Upon agreement with the partner healthcare cluster on test-bedding, when should test-bedding be completed?	Test-bedding should be completed in a simulated and/or clinical environment complying to regulations and institutional policies in the partner healthcare cluster. This should be completed within twelve (12) months.
Will the recruitment of participants for the test-bed be conducted by the healthcare cluster?	There will be a principal investigator at the test-bedding site from the partner healthcare cluster attached to oversee the project. The hospital's stakeholders/ research offices will also look at how the solutions will be used to benefit the patients and/or staff.
Do we need to have an in-house principal investigator?	No. The principal investigator will be from your assigned partner healthcare cluster.
Can we test-bed in the healthcare institutions outside of the three participating healthcare clusters listed in this Challenge?	No. The healthcare institutions for test-bed would only be from the participating healthcare clusters for this specific challenge. The participating healthcare clusters are National Healthcare Group (NHG), National University Health System (NUHS) and Singapore Health Services (SHS).
If we are successfully partnered with one healthcare cluster, can we use CHISEL funding to test-bed with other healthcare clusters?	No, the agreement and funding will be between one (1) start-up/SME and one (1) healthcare cluster only. It cannot be used for the test-bedding with other healthcare clusters. However, evaluation outcomes of the solution will be shared with the other healthcare clusters under the three (3) partner healthcare clusters, which will inform the healthcare cluster on the decision to adopt and procure the solution.
For solutions tackling patient journey, would we eventually have access to the patient data in the healthcare cluster? What should we take note of regarding data privacy issues?	Broadly speaking, there should not be access to discrete data. You may discuss this with the partner healthcare cluster as to what data is needed to carry out a meaningful test-bed project. All prevailing data privacy practices would have to be adhered to.

Question	Answer
Regarding the deployment environment of the test-bedding solution, especially for digital solutions, is there any requirement or preference, e.g. cloud based/ private cloud/ public cloud?	This will be at the discretion of the partner healthcare cluster and their respective IT offices, who will advise on the best and/or encouraged practices. During test-bedding, solutions would not be integrated into healthcare institutions systems. Test-bedding would be conducted in a stand-alone or virtual environment. Synapxe is an agency that we work closely with that would help to review and advice on your solutions' test-bedding infrastructure set-up, security concerns etc.

Compliance / Regulatory

Question	Answer
If our solution involves patient data collection, what level of compliance with data security regulations is expected for the demo/ test-bedding?	All test beds will have to be performed in accordance with local and hospital regulations and guidelines. Depending on the solution, some projects will need to engage the local IT agency for public healthcare, which will be done with the partner healthcare cluster's IT offices.
We have solutions that have received regulatory approvals and certifications (e.g. FDA approved) in other countries and region, e.g. EU, China, Asia, but not Singapore. Will our solution be eligible for test-bedding?	Yes, your solution will be eligible for submission. You are encouraged to submit your proposal as well if the solution is already in the process of obtaining HSA's clearance. Depending on healthcare institution requirements, if the evaluation results of the test-bed are favourable and has potential to be mainstreamed, scaled up and/ or integrated with healthcare institutions, certifications may be required after the test-bed.

Intellectual Property

Question	Answer
How will the background and foreground Intellectual Property (IP) ownership be managed?	The intent of CHISEL is not to co-create or co-develop solutions. Hence, there will not be much opportunity for foreground IP creation. Most of the IP will reside with the company as background IP. However, if there are opportunities for publications, the start-up and SMEs can further discuss this with your partnered healthcare cluster.
